1

**Engagement is key:** It is really important to attend all of your lectures and labs. This allows you to discover and explore what subject areas you like and learn about your strengths and interests.

2

**Focused Learning:** Develop a routine and reflect on your lectures— What are the key areas? Where are you at with understanding them? What is clear and what is not?

3

**Vocabulary:** Technology courses tend to contain a lot of terminology and their can be multiple terms for the same thing. It might be worthwhile to keep a log of new words/terms and their meanings to refer back to.

4

**Coding:** Reading paper notes reinforces learning so remember to print & sort notes into folders. Try to understand the main aim of each programme & break them into bytesize chunks. Stick to the exact syntax.

5

**Manage Your Time:** Tech assignments can be slow and when coding, hours can pass without you realising it. Get organised - having a calendar and marking in due dates makes progress on your assignments easier.
